THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

DETAILED ACTION

This office action is in response to Applicant's Amendments and Request for Continued Examination filed 16 June 2008. Claims 1-6, 8-12, 14-17, 19-22, 24-26 and 29-33 are pending with claims 1, 9, 15, 20 and 25 in independent form. Claims 7, 13, 18, 23 and 27-28 are cancelled.

Allowable Subject Matter

1. Claims 1-6, 8-12, 14-17, 19-22, 24-26 and 29-33 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art of record fails to teach or fairly suggest to one of ordinary skill in the art, in conjunction with all the other limitations of the claims:

With respect to claim 1 and all its dependencies:

- An optical code reading system having a signal processor with means for performing an analysis utilizing principles of axial chromatic aberration and a value indicative of the parameter of a single wavelength component of at least one wavelength component that is associated with a single data signal of at least one data signal representing one of the colors where the amount of movement of at least one lens for adjusting a focus quality of an image is determined based on the analysis

With respect to claim 9 and all its dependencies:

- A method for imaging and decoding an optical code by performing an analysis utilizing principles of axial chromatic aberration and a value

Art Unit: 2876

indicative of the parameter of a single wavelength component of the at least one wavelength component that is associated with a single data signal of at least one data signal representing one of the colors and determining an amount of movement of at least one lens for adjusting a focus quality of an image corresponding to the optical code based on the analysis

With respect to claim 15 and all its dependencies:

- A system to adjust a focus quality of an image and decoding data encoded by the image having means to perform an analysis utilizing principles of axial chromatic aberration and a value indicative of the parameter of a single wavelength component of at least one wavelength component associated with a single data signal of at least one data signal representing one of the colors and an actuator to move at least one lens in accordance with the analysis to adjust the focus quality of the image where the amount of movement is determined based on the analysis

With respect to claim 20 and all its dependencies:

- A method to adjust a focus quality of an image and decoding data encoded by the image by performing an analysis utilizing principles of axial chromatic aberration and a value indicative of the parameter of a single wavelength component of at least one wavelength component that is associated with a single data signal of at least one data signal representing one of the colors and moving at least one lens in accordance

with the analysis for adjusting the focus quality of the image where the amount of movement of the lens is determined based on the analysis

With respect to claim 25 and all its dependencies:

- A method to determine a focus discriminator for a focusing system by generating a data signal that is representative of a parameter of a single wavelength component of an image onto a sensor of the focusing system and performing an analysis by determining a difference between a value indicative of the parameter of the wavelength component and a value that is stored within a memory where the difference is a focus discriminator that indicates whether the image requires focusing by the system and decoding the encoded data

The prior art of record fails to provide sufficient teaching or motivation to one of ordinary skill in the art to provide the additionally recited features of these claims in the combinations as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Art Unit: 2876

- Fukuoka US 5,295,077 teaches focusing an image in a digital electronic still camera. This is different from Applicant's claimed invention in that Fukuoka requires more than 1 color and signal to focus the camera by using color difference signals of at least Red and Blue for focus control as opposed to a single signal as in Applicant's claimed invention
- Tamura et al. US 4,274,107 teaches a memory type automatic adjustment system where parameters are controlled based on a comparison to a predetermined range. This is different from Applicant's claimed invention in that Tamura requires red, green and blue signals to focus the camera by using color difference signals of at least two signals as opposed to a single signal as in Applicant's claimed invention
- Thielemans et al. US 6,483,555 B1 teaches a device for the automatic adjustment of a projector. This is different from Applicant's claimed invention in that Thielemans determines focus one color at a time but doesn't compare a single, or any color signal to a stored value
